Customer Problem Statement Template

A well-articulated problem statement keeps the solution focused on real needs of policymakers, researchers, and students who work with development data.

I am (Customer)	I'm trying to	But	Because	Which makes me feel
A policymaker analyzing a developing region	Understand how close a region is to Medium/High HDI	Static PDF tables from UNDP are slow to explore	There's no interactive way to test 'what-if' indicator values	Frustrated at how hard to turn data into a decision
A researcher studying development trends	Compare a hypothetical country profile against real ones	Spreadsheets require manual formula work each time	There's no tool that instantly classifies a scenario into a tier	Would feel confident with a quick, repeatable prediction tool
A student learning about HDI	See how life expectancy, schooling, and income combine	Textbooks only show the formula, not the intuition	There's no hands-on way to experiment with the numbers	Curious, but currently underserved by static material
