

Communication

Date	14 July 2026
Team ID	
Project Name	HDI Predictor (Human Development Index Predictor)
Team Size	1 (Individual Project)
Maximum Marks	1 Mark

Communication Plan

As an individual project, formal team communication channels weren't required. “Communication” here reflects how progress was tracked and how feedback from iterative review was incorporated into the build.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Progress checkpoints	Per milestone	Chat-based review (Claude)	Lava Kumar Kavadana	Review each phase before moving to the next
2	Issue / bug discussion	As needed	Chat-based debugging session	Lava Kumar Kavadana	Resolve deployment errors (e.g. Python version mismatch)
3	Feedback incorporation	As needed	Direct request / iteration	Lava Kumar Kavadana	e.g. removing auto-filled Predict form defaults on request
4	Final demo rehearsal	Once	Local + live app walkthrough	Lava Kumar Kavadana	Confirm all 3 dashboards work end-to-end before submission

Communication Challenges & Resolutions

S.No	Challenge Faced	Resolution / Action Taken
1	Render deployment failed with a RecursionError on Python 3.14	Diagnosed as a matplotlib incompatibility; unpinned dependency versions so pip resolved newer, compatible package versions.
2	Render kept redeploying an old commit after a fix was pushed	Manually cancelled the stale in-progress deploy so the queued deploy for the latest commit could start immediately.
3	Confusion between GitHub (code host) and Render (live host)	Clarified the distinction and added a “Live Demo” link directly in the README so both are easy to find from one place.
